The 19' Bartender is a smaller version of its sister, the 22' which was tested and approved by the U.S. Coast Guard. The 19' is powered with one outboard motor, 25 to 50 hp with a maximum weight of 214lbs. The outboard is placed in a motor-well which will allow it to tilt-in for beaching or bumping submerged objects. Engines should remain as per plans for proper balance. If you desire inboard power, look at the 20.5' Bartender.

The 19' performs best when built light-weight to spec with a simple runabout windshield or a small doghouse to elevate the windshield to standing level. It can be built with or without a self-bailing cockpit deck. You'll like the balanced performance of this scrappy boat which handles beautifully at slow or fast speeds, and it is easily trailered.
